

DC Power Supply Set

The DC Power Supply Set enables the communication testers of the 4200 series made by Willtek, Wavetek or Aeroflex to work with DC power. The set consists of an external power converter from 120 - 230 VAC to 19 VDC and a build-in DC/DC power converter, which suits the 4200 series.

For the modification, the 4200 has to be send to the MESTEC Service Center. The price for the DC Power Supply Set is based upon a substitution of the internal power supply and does already include the cost for mounting and test. We recommend to make use of this opportunity and to calibrate the 4200 system.

This set runs in a stand-alone mode or together with the rechargeable battery units PN 100-411 or PN 100-412.

Technical Data

External Power Supply

Input	120 - 230 VAC 50 - 60Hz
Output	19 VDC; 3.7 A
Working Temperature	-20 - +40°C
Sizes	133 x 60 x 30 mm
Weight	350 grs

Internal Power supply

Input	9 - 24 VDC
Output	6 VDC; 3 A
Working Temperature	-40 - +80°C
Sizes	111 x 60 x 30 mm
Weight	200 grs
